    Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 B 8

RESULT 1 AAB10067 UlA protein derived tryptic peptide #6 AAB10067 standard; peptide; 9 Unidentified. UlA protein; 03-NOV-2000 AAB10067; WPI; 2000-400193/34. WO200031544-A1 (XERI-) XERION PHARM GMBH. 24-NOV-1998; 23-NOV-1999; 02-JUN-2000 LL, Ng (first entry) tryptic peptide; functional site; 98DE-1054196 99WO-EP09052 B detection

Identifying functional sites in proteins, useful for detecting epitopes and ligand binding sites, by complexing with tagged binding partner, then laser irradiation to alter the protein close to the tag

Example

24;

41pp; German

invention describes a novel method for identifying one or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    functional sites in a target protein (1) which comprises: (1) complexing (1) with a binding partner (A) that carries a laser-activatable tag; (ii) complex (II) formed with laser light to generate free cradicals that alter bound (I) selectively at the binding sites; and (iii) complex (III) formed with laser light to generate free cradicals that alter bound (I) selectively at the binding sites; and (iii) complex (III) selectively at the binding sites; and (iii) complex generate region by a combination of protein cleavage and command spectrometry (MS). The method is used to identify any type of command selectional site in any type of protein but particularly ligand-binding control of the complex of the complex generated proteins or oncogenic proteins, and to inactivate target complex generated proteins. The method does not require knowledge of the complex generated protein structure of (I), and is simple, rapid and automatable. It can identify non-linear or discontinuous epitopes, and determines composed to the complex generated generated in vitro or in vivo for studying intra- or extra-cellular proteins. This sequence represents a complex generated the invention of the invention which is used to illustrate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                 This invention describes a novel method for identifying one or more functional sites in a target protein (I) which comprises: (i) complexing (I) with a binding partner (A) that carries a laser-activatable tag; (ii) irradiating the complex (II) formed with laser light to generate free radicals that alter bound (I) selectively at the binding sites; and (iii) identifying the altered greion by a combination of protein cleavage and mass spectrometry (MS). The method is used to identify any type of functional site in any type of protein but particularly ligand-binding sites and epitopes: It can also be used to investigate pathologically altered proteins. The method does not require knowledge of the three-dimensional structure of (I), and is simple, rapid and automatable. It can identify non-linear or discontinuous entropy and determined the content of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        functional site in any type of protein but particularly ligand-binding sites and epitopes. It can also be used to investigate pathologically altered proteins or oncogenic proteins, and to inactivate target pathological proteins. The method does not require knowledge of the three-dimensional structure of (I), and is simple, rapid and automatable. It can identify non-linear or discontinuous epitopes, and determines protein function without inactivation of (I) (since the tag is bound to (A) not to (I) itself). The method may be used in vitro or in vivo for studying intra- or extra-cellular proteins. This sequence represents a UIA protein derived tryptic peptide which is used to illustrate the method of the invention.
                                                                             It can identify non-linear or discontinuous epitopes, and deprotein function without inactivation of (I) (since the tag
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying functional sites in proteins, useful for detecting epitc and ligand binding sites, by complexing with tagged binding partner, then laser irradiation to alter the protein close to the tag
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 2; Page 24; 41pp; German.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δ
                                                                                                                                                                                    cc functional sites in a target protein (I) which comprises: (i) complexing (I) with a binding partner (A) that carries a laser-activatable tag; (ii) cliraddiating the complex (II) formed with laser light to generate free: Cradicals that alter bound (I) selectively at the binding sites; and (iii) clidentifying the altered region by a combination of protein cleavage and Clidentifying the altered region by a combination of protein cleavage and Clidentifying the altered region by a combination of protein cleavage and Clidentifying the altered region by a combination of protein cleavage and Clidentifying the altered region by a combination of protein cleavage and Clidentifying the analystype of protein but particularly ligand-binding Clidentifying it can also be used to investigate pathologically Clientered proteins or oncogenic proteins, and to inactivate target Clickered proteins. The method does not require knowledge of the Clintered dimensional structure of (I), and is simple, rapid and automatable. Clickered function without inactivation of (I) (since the tag is bound to Clintered function without inactivation of (I) (since the tag is bound to Clintered function derived tryptic peptide which is used to illustrate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                    chinection by an acid-resistant microorganism (A) by treating a faecal confection by an acid-resistant microorganism (A) by treating a faecal confection by an acid-resistant microorganism (A) by treating a faecal confection with at least two different monoclonal antibodies (MAb) (or their fragments or derivatives) or aptamers (collectively (I)) and detecting conference of the first and second (I) bind to epitopes of different antigens (C) (Ag). These epitopes are present, after passage through the intestines, conference or immunized with (A), or its extract, lysate, derived protein confered or immunized with (A), or its extract, lysate, derived protein conference or immunized with (A), or its extract, lysate, derived protein conference or fragment, or with a synthetic peptide. Practically all mammals display at least one of the specified epitopes. The method is used to detect confection by acid-fast bacteria, particularly of the genera Helicobacter, conference of the specified epitopes. The method is direct and non-invasive, and provides an inexpensive and easily standardizable diagnosis, despite possible conference represents a fragment of a H. pylori 26 kba protein-binding antibody heavy chain complementarity determining region CDR3 which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            H. pylori 26 kDa protein-binding antibody heavy chain CDR3 peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Unidentified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Acid-resistant microorganism; detection; faecal; intestine; infection monoclonal antibody; heavy chain; complementarity determining region;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-NOV-2000

                                                                                                                                                                                                                                                                                                                                               This invention describes a novel method for identifying one or more C functional sites in a target protein (1) which comprises: (1) complexing C(1) with a binding partner (A) that carries a laser-activatable tag; (1i) cradiating the complex (II) formed with laser light to generate free CC radicals that alter bound (I) selectively at the binding sites; and (iii) C identifying the altered region by a combination of protein cleavage and CC mass spectrometry (MS). The method is used to identify any type of CC functional site in any type of protein but particularly ligand-binding CC sites and epicopes. It can also be used to investigate pathologically CC altered proteins or oncogenic proteins, and to inactivate target CC pathological proteins. The method does not require knowledge of the CC three-dimensional structure of (I) and is simple, rapid and automatable. CC tran identify non-linear or discontinuous epitopes, and determines CC protein function without inactivation of (I) (since the tag is bound to CC (A) not to (I) itself). The method may be used in vitro or in vivo for Studying intra- or extra-cellular proteins. This sequence represents a complete continuous discontinuous epitopes and determines complete the tag is bound to continuous discontinuous epitopes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁

The breast cancer associated protein is usef in an anti-sense or binding protein. Concertainty the protein is used in an anti-sense or binding protein. Concertainty the protein in breast tissue, blood, serum, plasma, sweat, concerting the protein in breast tissue, blood, serum, plasma, sweat, concerting the protein in breast tissue, blood, serum, plasma, sweat, concerting the protein and fluid, lymph, vaginal secretions, semen, spinal containty, ascitic fluid, saliva, sputum or breast exudate isolated from the containty of the breast cancer associated proteins permit a rapid content of the present sequence is a tryptic peptide of human U2 small nuclear concertion. The protein Bull serve that the protein because of the present sequence is a tryptic peptide of human U2 small nuclear concertion associated marker protein which has binding affinity to a nickel surface-enhanced laser desorption and ionisation (SELDI) chip. The peptide is obtained from U2 snRNP B by proteolysis with trypsin.
                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                    5
                                                                                                                                                                                                                                                                                                                                     The present invention relates to marker molecules indicative of disease in mammals which are identified using a new method in which an abundant protein is removed from a sample to enable less abundant molecules to be evaluated as possible markers, the sample is then fractionated and fractions analysed by known mass spectroscopy techniques and results compared between individuals with and without the disease. The method is useful for identifying disease markers in mammals, especially humans, cespecially markers for cancer, such as breast, lung, prostate, bladder, cervical, ovarian, colon or colorectral cancer. Once identified, the markers can be used as targets in assays for detecting the disease and in disease treatment e.g. administration of antibodies binding to and cellminating/reducing activity of the target protein in vivo. The present sequence is a tryptic peptide of human U2 small nuclear ribonucleoprotein B (U2 snRNP B) which is used in the invention. The peptide is obtained from U2 snRNP B by proteolysis with trypsin.

Note: The present sequence is also shown in sequence listing of the specification, but lacks an amino acid in the N-ternimal end and in the
                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity much be associated with aberrant acceptance of BLyS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)).                                               AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletion in a patient's genome that affect the activity of P by expressing
                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding useful for preventing,

The present invention describes human discs large I gene (dlg) family expressible in nerve tissue. Also described are: (1) a polynucleotide (PN) encoding dlg and comprising a 3100 (I) or 3213 bp (II) sequence; (2) RNA corresponding to PN having a sequences (I) and (II); (3) RNA having a base sequence translated by dlg; (4) an antisense PN having a at least 15 bp sequence, and which is a part of PN of (1); (5) a derivative of the antisense PN; (6) an antibody specific for dlg, and (7) an antibody specific for a polypeptide having a 817 or 849 an sequence. The polypeptide, RNA's and antibodies can be used for detection of dlg. The antisense PN can be antisense PN can be
inactive proteins or to supplement the patients own production Additionally, N may be used to produce the colon cancer-associa
                                                                                                                                                                                                                                                                                                                       Claim 11; Page 9724; 9803pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TANGO protein; INTERCEPT protein; neurological disorder; central nervous system; focal brain disorder; bipolar affective disorder; global-diffuse cerebral disorder; cerebrovascular; Alzheimer's disease; senile dementia; Huntington's disease; amyotrophic lateral sclerosis; Parkinson's; Gilles de la Tourette's syndrome; hypertension; sleep;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        present invention.

N.B. Pages 666 to 682 and page 7053 of the missing at time of publication, meaning no SEQ ID NO:1027 to 1052, 7921 and 7922.
                                                                           The present invention relates to TANGO or INTERCEPT proteins and coding sequences (see ARF45121-F45136 and ARF45138-F45139 and ARB66037, ARB66037, and ARB66083 and ARB66085). The TANGO/INTERCEPT proteins and coding sequences are useful for the treatment of neurological disorders such as central nervous system (CNS) disorders, CNS-related disorders, focal brain disorders system (CNS) disorders, CNS-related disorders include hearing signal and cerebrovascular disorders and other neurological and cerebrovascular disorders. The CNS disorders include nlzhelmer's disease, senile dementia, Huntington's disease, amyotrophic lateral sclerosis, Parkinson's, Gilles de la Tourette's syndrome, autonomic function disorders such as hypertension and sleep disorders,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SQ
CC D-amino acid histatin 2, found in human paratiol secretion, where at CC least one amino acid in the peptide is in the D-configuration. The CC peptide is preferably modified by an acetyl or carbamyl addition at the C-terminus and/or amidation at the C-terminus. The novel D-amino CC acid-containing peptide, based on the naturally occurring histidine-CC rich human histatins, have anti-fungal and anti-bacterial activity and CC are useful in compositions for the treatment of oral, vaginal, urethral, CC mucosal, respiratory, skin, ear and ophthalmic fungal or bacterial cc infections. It is particularly effective against local and systemic CC candida albicans infection, against oral bacterial diseases such as CC caries and periodontitis (by inhibiting e.g. Streptococcus mutans and CC porphyromonas gingivalis) and against Clostridium histolyticum. The D-CC amino acid-containing peptide has superior anti-fungal (especially canti-candidal) and anti-bacterial activity, particularly on a weight basis, compared to the natural L-amino acid forms of histatins and CC histatin-based peptides. The presence of D-residues also makes the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The present sequence represents histatin 2, found in human paratoid secretion, where at least one amino acid is in the D-configuration. The peptide preferably is modified by an acetyl or carbamyl addition at the N-terminus and/or amidation at the C-terminus. The peptide, based on the naturally occurring histidine-rich human histatins, have anti-fungal and anti-bacterial activity and are useful in compositions for the treatment of oral, vaginal, urethral, mucosal respiratory, skin, ear and ophthalmic fungal or bacterial infections. It is particularly effective against local and systemic Candida albicans infection, against oral bacterial diseases such as caries and periodontitis (by inhibiting e.g. Streptococcus mutans and Porphyromonas gingivalis) and against Clostridium histolyticum. The peptide has
                                                                                                                                                                                                                                                                                                                                           07-JUN-1995;
